

Metals and Engineering **FAST TRACK** Apprenticeship

What is a Challenger **FAST TRACK** apprenticeship?

Our Metals and Engineering **FAST TRACK** Apprenticeship program utilises existing skills, industrial experience and knowledge to allow apprentices to complete their apprenticeships based on competency, rather than time served.

Challenger TAFE has three years of **FAST TRACK** experience with proven outcomes.

Apprentices with valuable industry experience are formally acknowledged with an internationally-recognised certificate.

The program caters for experienced metals and engineering workers from the fields of boilermaking, boilermaking/welding, welding, machining, mechanical fitting and marine fitting.

How does the Challenger **FAST TRACK** apprenticeship work?

Each application is treated as unique and tailored to the needs of both employers and applicants.

The program will feature:

- Recognition of prior learning
- On the job training and assessment
- Self-paced learning
- Project or enterprise-based learning and assessment
- Intensive support programs

Metal Trade Employers

Do you have accomplished committed and experienced workers?

Provide them with the invaluable opportunity to become trade qualified with an apprenticeship.

Do you need accomplished, committed and experienced workers?

Employ an apprentice and see your business benefit and grow.

You may be eligible for a range of financial incentives offered by the Australian Government. Contact the Australian Apprenticeship Centre on 13 38 73 to find out what incentives you may be eligible for.
